

PROTECTING BIODIVERSITY

Autostrade per l'Italia's commitment

We promote environmental awareness in relation to biodiversity issues

We work with institutions, administrations and stakeholders to foster a coordinated, holistic approach

We apply 'mitigation hierarchy' guidelines to the development and operation of infrastructure, thus minimising damage to the environment

In each construction project, we pursue the 'no net loss' principle and, where possible, the 'net positive' principle

We work to preserve biodiversity in the vicinity of infrastructure

We protect wildlife and ensure user safety by implementing initiatives such as animal barriers and safe crossing paths, and monitor their impacts through KPIs
